Integrators' List

Home > Integrators' List

The IBTA Integrators' List is a compilation of all products that have been tested and accepted by the IBTA as being compliant with the InfiniBand™ architecture specification. New products are added every spring and fall, following each Plugfest event. Vendors with products on the list receive access to a [special marketing program](#) and logos which may be used in promotional materials and affixed to their cables and devices.

• [Click here for the latest cable and device Integrators' List](#) •

The Integrators' List is designed to support data center managers, CIOs and other IT professionals with their planned deployment of InfiniBand solutions.

End users and OEMs frequently reference the IBTA Integrators' List prior to the deployment of InfiniBand-related systems, including both small clusters and large-scale clusters of 1,000 nodes or more. Many OEMs use the list as a gateway in the procurement process.

The Integrators' List was started in 2003 and currently contains hundreds of InfiniBand-compliant products.

Combined Cable and Device Integrators' List - In October 2011, the IBTA hosted its 20th Plugfest at the UNH-IOL. Vendors had the opportunity to place their cables and devices through a rigorous testing process to determine compliance with the specification. Successfully passing the compliance requirements (as governed by the IL Policy) permitted these cables to be placed on the Integrators' List. Both the cables and the devices were then put through exhaustive Interoperability testing using the Open MPI test suite. The following is the most current list of cables and devices that have passed these tests.

- **Latest Integrators' List: Plugfest #20 - October 2011 Combined Cable and Device Integrators' List**

The document that governs this testing process is the [Integrators' List \(IL\) Policy](#).
